FlowTree

Your money, with purpose

A practical guide to planning your monthly priorities without pretending they are bank balances.

What FlowTree does	What it does not do
Organizes planned income into a clear monthly flow.	It does not move money, connect to a bank, or confirm savings.

The basic flow

Income -> planning categories -> destinations

Every value is a monthly planning target. A yearly target is converted into the amount that needs to be set aside each month.

Start with Home

Home is the single view for the whole monthly plan.

• Add each income source, then set aside a safety buffer.

• Add planned monthly amounts under the appropriate category.

• Use the Available figure as a planning result after the buffer and targets are reserved.

• If the plan says Over-planned, reduce or reorder targets before relying on it.

• Select a branch to see its child destinations. Use Full tree overview to see every branch together.

Funding order matters

FlowTree follows the visible category and child order. It reserves the parent amount first, then directs any remaining allocated amount to that parent’s children. Change your tree order when you want to change the planning priority.

Sinking funds

• Use for yearly costs such as property tax, insurance, renewals, or annual subscriptions.

• Set a future target date. FlowTree spreads the required remaining amount across the months until that date.

• The result is a planning pace, not an instruction to transfer money.

Loans and life goals

Focused views for the items that need more context.

Loans

• Enter the original principal, principal remaining, annual rate, remaining tenure, and optional extra principal payment.

• Review the estimated payment, interest, payoff timeline, and month-by-month schedule.

• Confirm the lender’s current rate, fees, outstanding amount, and part-payment rules. An extra payment must be processed as principal part-payment to shorten tenure; it may otherwise be treated as advance EMI.

Life goals

• Create a monthly goal or yearly target such as travel, a major purchase, or a milestone fund.

• The editor previews the monthly amount that will be added to the Life goals category on Home.

• Edit it whenever your amount, timing, or priority changes.

Monthly check-in

At the start of each month, update income, the buffer, loan balances, extra principal payments, and yearly target dates. Then use Home to decide what your plan can support.

Saving your plan

Your plan stays in your control.

Google Drive

• Google Drive is optional. Start sign-in from the profile menu.

• FlowTree creates or uses a private FlowTree folder and stores one readable file: flowtree-plan.json.

• The app asks for the narrow drive.file permission only. It does not access Gmail, Calendar, Contacts, or general Drive contents.

• Financial plan data lives in the browser only while the page is open. FlowTree does not keep a local browser copy after the tab is closed.

Edit the JSON directly

Choose Edit plan JSON in the profile menu to work with the same simple file stored in Drive. FlowTree validates the JSON before it replaces your active plan. Keep IDs unique and keep monetary values as numbers, not quoted text.

Important reminder

FlowTree is a planning aid. It is useful for deciding how income could be allocated, but it cannot replace your bank statement, loan statement, tax records, or professional financial advice.
